

eMaritime Group Launch - Simulator Operators Training Course (SOTC) With Free Debut on 19th June

eMaritime group have written a new 5 Day Simulator Operators Training Course (SOTC) and will launch it with a free one-off session from 19th - 23rd June 2017 at eMaritime Group HQ, Whiteley, Hampshire.

The SOTC course has been written to give anyone who wishes to learn how to teach on a maritime simulator the necessary skills, teaching techniques and aids within a standard bridge simulator environment. The course is generic to simulator training in general and so can be applied to any make or model of simulator.

Course topics covered include:

- Role of a Simulator Operator
- Simulation Equipment Management
- Rules Of the Road
- Ship Handling Principles
- Ship Board Emergency Procedures

- Responsibility of a Simulator Operator in Critical Situations

The author of the course George Ward explains the origins of the course:

"The simulator has become a vital tool for maritime colleges and companies all over the world. But as a company who run two "Train the Trainer' courses, we are only too aware of their complexity which not only can be overwhelming to the instructors, but also they're not getting the most out of the simulators potential. We've written the SOTC course to address these issues, and we would love to invite those who are interested in attending to the inaugural 5 day course on Monday 19th June"

- George Ward, eMaritime Group Project Support

If you wish to attend or want more information please visit: www.ecdis.org/sotc

End.
